

# Which industry creates more Operating Profit, Information Technology or Real Estate in 2016?

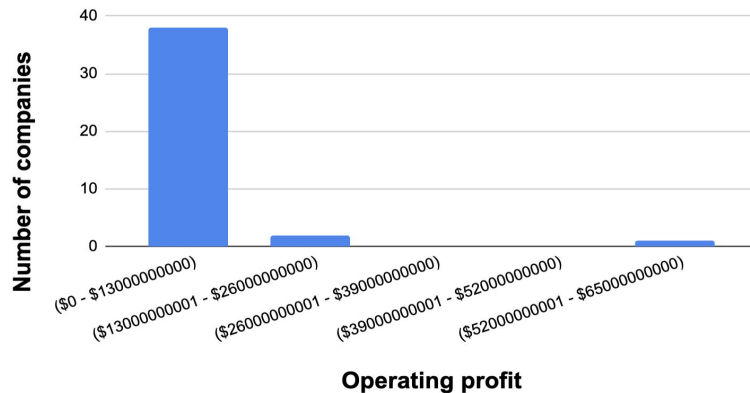

**Operating profit of Real Estate sector in 2016**

Here are the Histograms of Operating profit of Information Technology and Real estate sectors in 2016.

One histogram(IT sector) is Right-skewed, that means mean is greater than median and the other histogram(Real Estate sector) is uniformly skewed, that means mean is equal to median.

**Operating Profit of Information Technology in 2016**

The mean for operating profit of IT sector is about \$4.24 billion and for real estate is about \$663.4 million. The range of IT sector is \$60 billion and range of Real estate is \$643.8 million. However, the median for IT(\$960.4 million) is 1.4 times more than median for Real estate(\$684 million).The standard deviation is more(\$10 billion for IT and \$267 million for Real estate sectors).That means variability in operating profit in IT is higher,with more companies spending above \$10 billion, and more than 50% of the IT companies deriving operating profit more than \$960.4 million in 2016.
